DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to a method for filling a hole in a printed circuit board, classified in class 29, subclass 830 plus.
 - II. Claims 10-16, drawn to a structure of a hole formed in a printed circuit board, classified in class 174, subclass 262.
 - III. Claims 17-24, drawn to a apparatus for filling a hole in a printed circuit board, classified in class 505, subclass 413 plus.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the conductive hole can be formed without electroplating but by just filling conductive material in the hole's opening.
4. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as

806.05(e)). In this case, the process as claimed can be practiced by hand that the applying photoresist material and washing the board to remove unexposed photoresist material both can be done by hand.

5. Inventions III and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case, the product as claimed can be formed by a different apparatus such that the conductive hole is formed by an apparatus, which fills the hole's opening with conductive paste instead of plating the inner surface of the hole with a conductor.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification. The search required for Group I is not required for Groups II and III and the search for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

7. A telephone call was made to applicants' attorney, Michael J. Bell, on 20 December 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
